FOR WEEK ENDING JUNE 30, 2017

MARKET TRENDS

JUNE 30, 2017

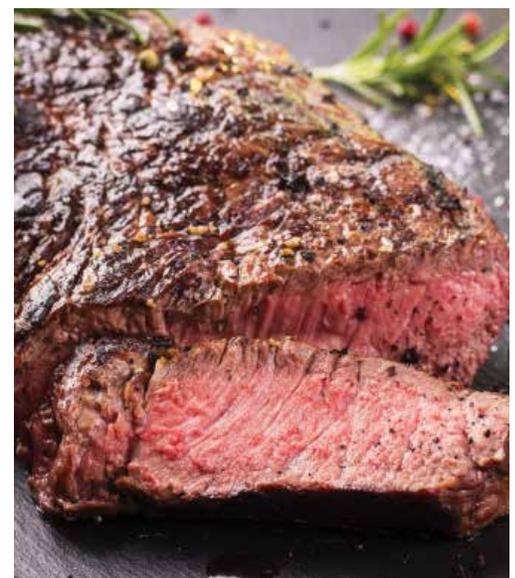

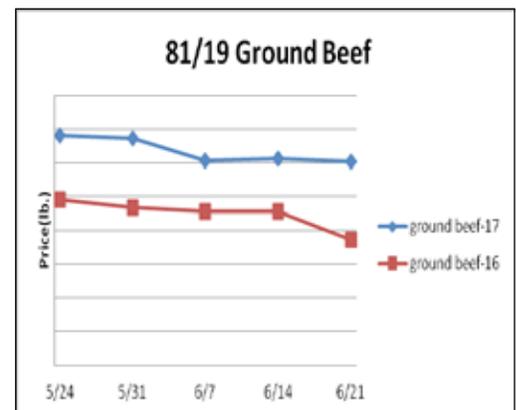

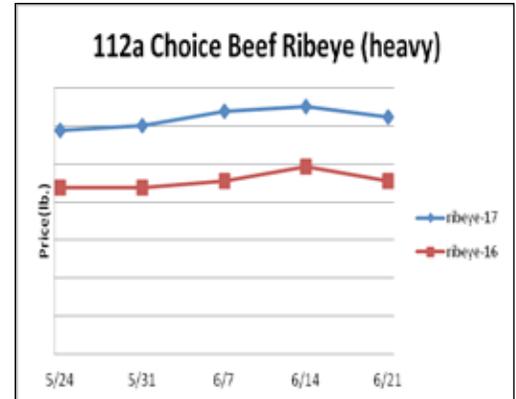

PERFORMANCE
FOODSERVICE

Beef, Veal & Lamb

Beef production last week rose .7% and was 1.3% larger than the same week last year. Dressed cattle weights have been on the rise as of late which is expected to continue during the next several weeks. This factor and a better supply of slaughter ready cattle could weigh on the beef markets this summer. May retail ground beef prices were down 4.3% from the prior year and the least expensive for the month since 2013. Retail beef prices are anticipated to rise roughly 10% during the next few months in response to the higher wholesale markets. This is likely to temper beef consumption and put downward pressure on the wholesale beef markets as well.

Description	Market Trend	Supplies	Price vs. Last Year

Grains

The U.S. spring wheat crop continues to deteriorate due to challenging weather. As of June 18th, just 41% of the crop was rated in either good or excellent condition by the USDA marking the smallest total for that date since 1988. Rain should help the crop in the near term but spring wheat prices may remain elevated.

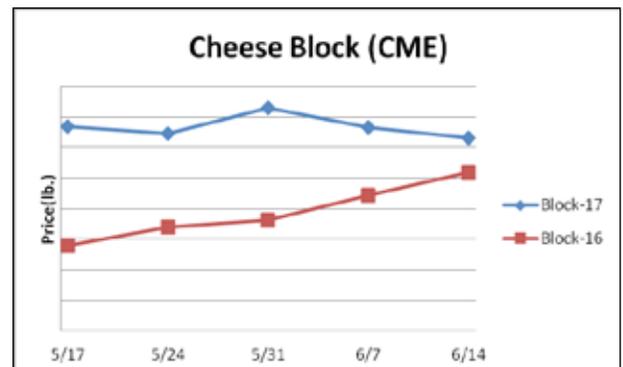

Description	Market Trend	Supplies	Price vs. Last Year

Black Beans, lb	Steady	Good	Higher
Rice, Long Grain, lb	Increasing	Good	Lower

Dairy

U.S. milk output during May was 1.8% larger than the previous year due to a .8% larger milk cow herd and a 1% gain in milk per cow yields. Milk production in the two largest producing states, California and Wisconsin, was below 2016. Milk farmers added a net 2,000 head to the herd during the month making it the biggest since the 1990's. This provides the opportunity for milk output growth versus the prior year to expand in the coming months. Cheese prices have been on the defensive as of late but seasonally declining output and better export demand may support the markets.

Description	Market Trend	Supplies	Price vs. Last Year
Cheese Barrels (CME)	Decreasing	Good	Lower

MARKET TRENDS

JUNE 30, 2017

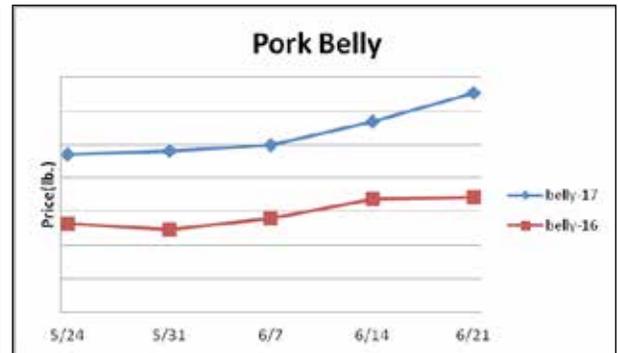

PERFORMANCE
FOODSERVICE

Pork

Pork output last week declined .7% but was 1.1% larger than the same week a year ago. Pork production may continue its seasonal decline in the near term but is expected to bottom in July. The USDA is forecasting Q3 pork output this year to be 195 million pounds bigger than Q2 marking the largest increase for that period since 2009. This could be accompanied with lower pork prices. The average retail bacon price during May declined from April but was still up 2.1% year on year. Wholesale pork prices are likely to remain expensive into July.

Description	Market Trend	Supplies	Price vs. Last Year

72% Trimmings	Increasing	Good	Higher

MARKET TRENDS

JUNE 30, 2017

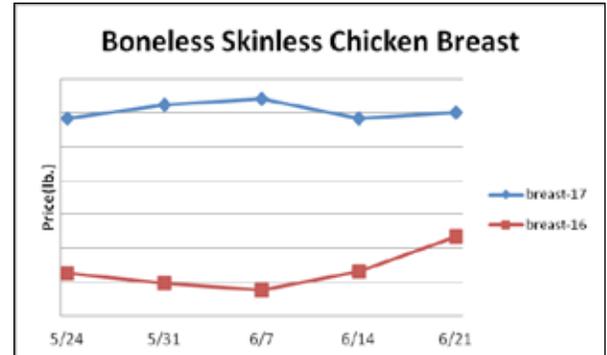

PERFORMANCE
FOODSERVICE

Poultry

Chicken production for the week ending June 10th was 2.8% better than the same week a year ago. The six-week average for chicken production also stands at 2.8% better than 2016. The USDA is forecasting chicken output this summer to be just 1.6% bigger than the previous year. If true, this could limit the seasonal downside in the chicken breast markets and be supportive of wing prices. The average retail boneless skinless chicken breast price for May was 1.3% lower than last year and the least expensive for the month since 2012. If retail chicken breast prices don't rise in the coming months it would also be supportive of the wholesale chicken breast markets. Retail table egg prices in May were the lowest for the month in 11 years.

Description	Market Trend	Supplies	Price vs. Last Year
Whole Birds WOG-Nat	Decreasing	Good	Higher

MARKET TRENDS

JUNE 30, 2017

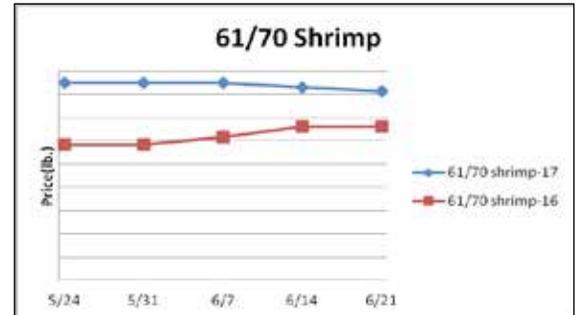

PERFORMANCE
FOODSERVICE

Seafood

Inflated shrimp prices are stimulating better shrimp imports in the U.S. During April, the U.S imported 16% more shrimp than the previous year marking a record for the month. It was also the biggest monthly total since January. If this import trend continues during the next few months it would suggest that the price risk in shrimp is to the downside.

Description	Market Trend	Supplies	Price vs. Last Year

MARKET TRENDS

JUNE 30, 2017

PERFORMANCE
FOODSERVICE

Produce

Idaho potato prices remain elevated. The June 1st U.S. potatoes in storage inventory was 8% larger than the previous year and the second biggest for the date since at least 2007. June 1st Idaho potato holdings, however, were 2.3% below last year. Although Idaho potato prices may remain expensive deep into August, the upside is likely only modest from here. Lemons are still in a very EXTREME MARKET and we are seeing a shortage in supply with oranges as well. Garlic is still very tight. Green Beans are very tight as well.

Tomatoes and Veg: All the eastern growing regions continue to experience rain in the form of heavy afternoon thunderstorms. The weather forecast calls for additional rains this week for all growing regions. This type of weather almost always causes less than ideal quality and suspect shelf-life. Therefore, we suggest that dry vegetable inventories be kept as tight as possible until we work through this product.

MARKET ALERT

- Apples – EXTREME
- Avocados – ESCALATED
- Green Beans – EXTREME
- Garlic – EXTREME
- Lemons – EXTREME
- Melons – ESCALATED
- Oranges – EXTREME
- Tomatoes (roma) – ESCALATED
- Watermelon – EXTREME

MARKET TRENDS

JUNE 30, 2017

PERFORMANCE
FOODSERVICE

Produce

Apples & Pears

Extreme: Demand from retail is extreme causing shortages industry wide. Golds and Grannys remain extremely short causing a shift in demand to all other varieties. We expect to see this continue through the rest of the season. Offshore deals are also very active due to the shortages in the Pacific Northwest. Bosc and Anjou pears are readily available domestically out of Washington. We expect to see California begin in July. Offshore Bosc and Packham supplies are steady.

Artichokes

We are seeing prices come down. Quality is good.

Arugula

Supplies of both baby and wild arugula are light and quality is fair.

Asparagus

The market is improving, however small, standards and larges are slightly higher in price than normal.

Avocados

ESCALATED - On the immediate horizon, we expect to see active markets continue. Long term market forecasts call for lighter volume crossing through Laredo, TX. Volume anticipated to be 20 million pounds next week, down 3 million pounds from the current week. California volume is mostly unchanged this week and Peru is increasing. We should see good Peruvian numbers by the end of the month. We anticipate an active avocado market for the foreseeable future.

Bananas

Demand and quality are good and inventories are lighter this week.

Green Beans

EAST: FOB prices are up again as rain takes a toll on the crop. GA, TN and eastern NC are the sourcing regions and all have been hit with rains. Supplies are very short. WEST: Supplies are still very light going into next week and prices are up once again. Prices and supplies are not expected to see relief until the end of June.

Berries:

Blueberries

Production is increasing in Baja California and Oxnard; prices have come down. Prices are varied throughout the region, quality is good.

Blackberries

Blackberries are good in supply through this month. Quality is good.

Raspberries

Good quality and supply. Central California growers are now harvesting as well.

Strawberries

Availability has tightened and prices are a bit higher. Quality is average to good.

Bok Choy

Quality is good and we are seeing some higher quotes on WGA cartons.

Broccoli

Good green color. Tight crowns that pack up well. Seeing occasional brown bead and pin rot. Overall quality is good.

Brussels Sprouts

Higher prices and tighter supplies remain but are leveling out. Quality is improving.

Cantaloupe

Market extremely tight with demand exceeding supply as the California and Arizona deserts are experiencing the record heat which has cut production in half, therefore very limited supplies. The excessive heat is very hard on the melons and vines, the people in the field as well can only work for a few short hours before calling it a day. The weather is supposed to last into next week so we do not expect to see any volumes for another 10 days at least. The overall quality has been excellent.

MARKET TRENDS

JUNE 30, 2017

PERFORMANCE
FOODSERVICE

Produce (continued)

Carrots

There is a good supply with solid quality.

Cauliflower

Market is good, quality is good and prices are down.

Celery

Good color, fresh and crisp with no major defects.

Cilantro

Quality is getting better but still seeing occasional decay and yellow leaf.

Corn

Georgia Sweet Corn is plentiful with promotional pricing available. White corn loading in the Central CA District now available with good volume available. Expect to see holiday pulls start late next week!!

Cucumbers

EAST: GA and NC fields have been hit extremely hard with heavy rains, resulting in some quality issues and shorter shelf life. FOB prices, despite quality concerns, remain steady. The new NJ product demands slightly higher prices than the older more southern fields.

WEST: Demand for Baja supplies remains light. FOB prices are down slightly this week. We expect supplies to improve which will put additional downward pressure on prices.

English Cucumber

Supplies from Eastern Canada are good while Nogales shippers should have English Cucumbers through next week.

Eggplant

EAST: GA remains as the core supplier. FOB prices are up slightly.

WEST: Desert supplies are almost finished while Fresno has not started yet. FOB prices are generally steady, but downward pressure is expected when Fresno starts up.

Fennel

Supplies for the week will be light.

Garlic

EXTREME MARKET The overall supply of garlic is very, very tight.

Ginger

Chinese ginger is in good supply. It is being offered at a substantial discount compared to ginger from Brazil.

Grapes

Market is steady on reds and greens with good volumes out of Mexico and Coachella valley, but we are starting to slow down on harvesting and will probably see some burn due to the record high heat we are experiencing especially in the California desert, where we are seeing temperatures in the 120 degree range which is hard on the fruit as well as the people, and the forecast is for it to last through the weekend. We will continue out of both of these regions through the month and will hopefully carry into the second week of July as we will probably have a later start here in the San Joaquin Valley compared to last year. We are anticipating our start date to be around July 10th here in the San Joaquin Valley and will carry us through December on fruit. The overall quality of the fruit is good right now, but we will keep you posted on how the fruit comes through these extremely hot days ahead.

Green Cabbage

Green cabbage has improved, supplies are good and quality is good in the east as well as the west. Volume incentives are available out of Georgia.

Red Cabbage

Quality and sizing have been great, with good color. Overall, the market is strong.

Green Onions

Iced: Prices are good and there is plenty of product.

Iceless: This market is steady with good volume.

MARKET TRENDS

JUNE 30, 2017

PERFORMANCE
FOODSERVICE

Produce (continued)

Honeydew

Market very strong demand exceeds supply on all sizes out of Mexico, and the California/ Arizona deserts. Also as previously mentioned the excessive heat is going cause some damage but most of all we will be harvesting very few over the next 7 days and will have to see how everything comes through this blast of heat. The overall quality of the fruit has been very nice with some excellent sugars and nice firm interior condition and good color. We expect to be in the desert through the second week of July and we should start here on the Westside around the first week of July and that will carry us into October on fruit.

Jicama

Normal prices and quality is good.

Kale (Green)

Demand is steady and quality is better.

Kiwi

Supplies are good. Prices are good and quality is average.

Lemons

Market extremely strong and demand far exceeds supply on all sizes and grades. The overall quality is good to fair, with some clear rot showing up due to all the moisture in the ground and warmer weather which promotes mold spores. We will see the market continue to increase as demand has been very good across the board, this will be the trend as we start heading into summer (tomorrow first day of summer) which is normal, but this situation is about a month earlier than last year. We are finished here in dist. 1 and now dependent upon only dist. 2 fruit, we have started to get some Chilean fruit in but only very light volume with better volumes coming the later part of next week and then should see steady volume arriving around the second week of July going forward. We will start to harvest some Mexican lemons

next week which is early but we are excited to get started and hopefully help ease some of the pressure. We will keep you posted on our progress out of Mexico.

Lettuce:

Butter

Prices are down and supply is good.

Green Leaf

Many of the Green Leaf fields are showing fringe burn and internal burn. Dehydration is also an issue. Quality is fair.

Iceberg

The warm weather is causing dehydration and speeding up growth rates, which is causing hard lettuce and growth crack. Also seeing weak tip and tip burn in some fields. Overall quality is fair.

Romaine

The warm weather is causing fringe burn and dehydration. Wind burn is also an issue. Overall quality is fair.

Romaine Hearts

Seeing wind burn and fringe burn issues varying from lot to lot. Good green color. Quality is good.

Iceberg Blends

Iceberg at the processing level is still firm to hard causing issues with chunks. Still seeing some internal burn and mildew damage. Overall condition is good but not great limiting some private label being available.

Chopped Romaine/Romaine Blends

There are issues of internal burn, fringe burn and mildew. Most romaine blends are pale in color to remove defects from the green outer leaves.

Limes

Limes are available. Great quality and color.

Napa

Supplies are normal. Quality is good.

Onions

The yellow market on supers colossal and jumbos should remain weak and unchanged for the upcoming week. Mediums on the other hand have been short in supply and moving up steadily. We don't expect any changes in the white market while we will probably see a small increase on our reds.

MARKET TRENDS

JUNE 30, 2017

PERFORMANCE
FOODSERVICE

Produce (continued)

Oranges

Market is very strong and day to day demand exceeds supply on all sizes fancy and choice as navels are all but finished and Valencia is the main variety. The fruit quality is good right now, but we are experiencing some record high temperatures this week and into next week which will probably cause some re-greening and fruit will also soften up a bit. This year's Valencia crop is going to come up short as well and some of the most recent estimates are about 15-20% lighter than last year so we will see some strong prices and do not expect to see things ease but we will keep you posted as we go forward. Also with this lighter Valencia crop we are going to experience very light supplies on 113's and smaller through the summer and we expect August through mid-October to be very difficult months as far as supply is concerned and we will probably see a gap between Valencia's and navels this year. We do not expect to start California navels until the later part of October. There will be some Chilean navels arriving next week so hopefully that will help a bit on the supply side.

Parsley (Curly, Italian)

We are seeing prices that are still higher but improving. Quality is average.

Green Bell Pepper

EAST: NC crop is in full production. GA crops are presenting lower FOB prices; however, this directly corresponds to the quality the region is producing. Quality defects are becoming more and more apparent due to the ample rains. Some eastern suppliers are turning to the west to meet demand due to the eastern quality imperfections. FOB prices are

steady for all sizes with some downward pressure.

WEST: FOB prices are slightly down as Bakersfield continues to harvest. Although temperatures are high in the region, quality is still good at this time.

Jalapeño Pepper

EAST: FOB prices are steady to up slightly with supplies coming from the GA region.

WEST: Supplies remain slightly limited as we wait for the Santa Maria crop to begin. Prices are steady as we head into next week.

Red Bell Pepper

WEST: As previously reported, the western FOB prices are high due to a short supply gap. Prices are anticipated to remain higher than usual for about another week or so until the supply gap ends.

Pineapple

Supplies are good, loading at the ports as well as forward distribution centers. Fruit is cutting nicely with good brix.

Idaho Potatoes

Fob prices are move up again this week on all sizes except the 90 and 100ct. Most shippers continue to report a shortage of large potatoes. As late as it is in the season all indicators are this upward trend will continue into harvest. The value continues to be with 90 and 100cts sized cartons.

Radishes

Quality is good and supply is slowing down.

Snow and Sugar Snap Peas

Snow and sugar snap peas are in high demand with good quality.

Spinach (Bunched)

Supply is good, quality has improved.

Spinach (Baby)

Baby and clipped spinach supplies are good. Quality is good, with good prices. There are some reports of mildew.

Spring Mix

There is plenty of product with good quality.

Green Squash

EAST: Supplies are available from GA, SC and NC. Prices are currently down slightly from last week.

WEST: Various regions continue in full production. Quality continues to be good and FOB prices are down moderately.

MARKET TRENDS

JUNE 30, 2017

PERFORMANCE
FOODSERVICE

Produce (continued)

Yellow Squash

EAST: FOB prices are generally steady with slight downward pressures on both grades. Supplies are available from the GA, SC, and NC regions.

WEST: Supplies are strong as we head into next week. Quality is good and FOB prices are down sharply.

Tomatoes

EAST:

Rounds

Our South Carolina crop is harvesting at full speed while northern Florida and southern Georgia wrap up. An abundance of rain in the FL and GA region has resulted in an earlier than normal end date. Overall quality is holding up better than expected taking into account the amount of rainfall the growing regions have seen. However, shelf life continues to remain suspect, therefore, inventories are recommended to stay tight. Good supplies from our coastal SC farms have resulted in FOB prices for all sizes to fall from last week. Our North Carolina and western South Carolina crop should begin in about 2-3 weeks.

Romas

Romas continue to be the only tomato commodity to remain tight through next week. The FOB prices are up for medium and large while extra-large remain relatively flat. Quality, like rounds, has held up better than expected. Supplies are not expected to improve for another few weeks.

Grapes

Our South Carolina supplies are plentiful. Quality is still good, again, considering the amount of rainfall.

Cherries

Demand continues to be weak. FOB prices are up from last week and quality is generally good.

WEST/MEXICO:

Rounds

As CA ramps up, temperatures are on the rise as well. The forecast is calling for 100+ degree temperatures over the next week (see forecast on last page). Tender fruit was initially apparent due to the high temperatures; however, we are currently seeing an overall improvement recently. We will see if the improvement can hold during the next round of extreme temperatures. FOB prices have fallen on all sizes in the west.

Romas

Romas will remain tight for about another week until the CA crop begins. Prices are generally flat currently, however, are expected to fall once CA is able to harvest and ship.

Grapes

Baja supplies are plentiful and demand remains weak. This is resulting in FOB prices to have fallen near suspension agreement minimums.

Cherries

Although prices are stable, supplies are still very limited out of the western region due to the few number of growers.

Tree Fruit:

Cherries

Hit and miss supply out of California while Washington begins to ramp up.

Nectarines

Yellow and White available Yellow Peaking 50s-80's, Whites Peaking 50's, 60's and 70's

Peaches

Yellow and White available- Yellow Peaking 50s, Whites Peaking 60's and 70's

Plums

40's, 50's, 60s and 70's available.

Apricots

Hit and miss out of California.

Watermelon

EXTREME: VERY LIGHT supply, the combination of the rain in the east and the light volume in the west has caused a severe shortage. We might not see better volume for the next 2 to 3 weeks.
