MARKET TRENDS

WEEK ENDING MARCH 15, 2019

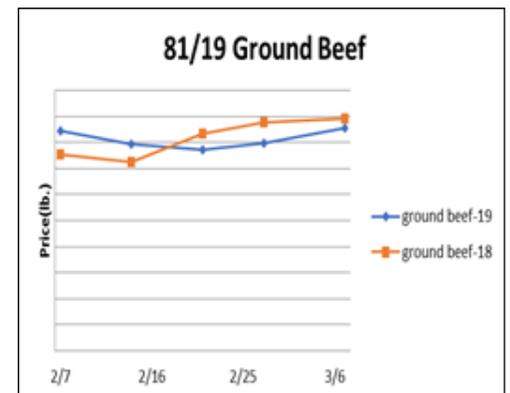

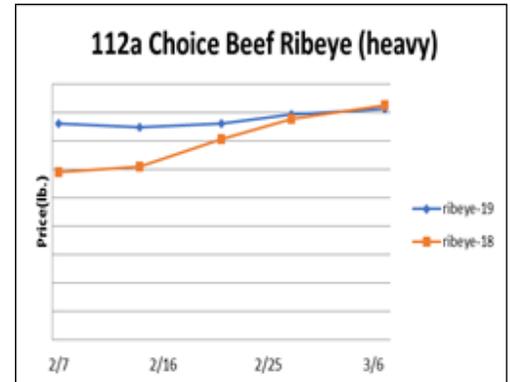

PERFORMANCE
FOODSERVICE

Beef, Veal & Lamb

Last week, beef production rebounded, up 3.5% week-to-week, but lighter carcasses and 1.3% fewer cattle harvested caused production to be 2.2% below a year ago. The semi-annual cattle report revealed a slightly larger beef cow herd, but cautious attitudes toward a continuation of herd expansion exists. Still a larger calf crop coupled with increasing inventories of feeder calves outside of feedyards continues to suggest growing beef production well into 2020. The cutouts remain firm, but year-over-year gains have slowed, and expectations are for modest weakness for beef prices before the usual spring demand season.

Description	Market Trend	Supplies	Price vs. Last Year

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

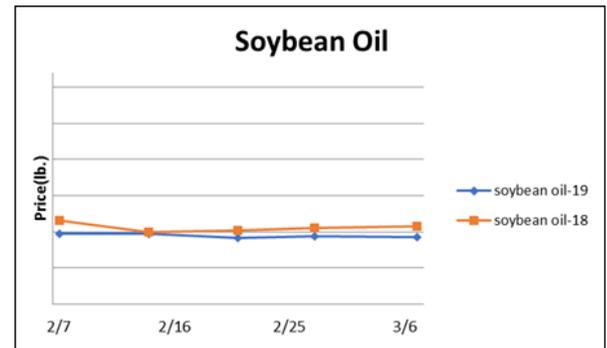

PERFORMANCE
FOODSERVICE

Grains

Expectations are that some sort of agricultural deal between China and the U.S. will be signed by the end of the month. This could lower the Chinese tariffs on U.S. soybeans, but this may not push prices notably higher due in part to decade plus high stocks.

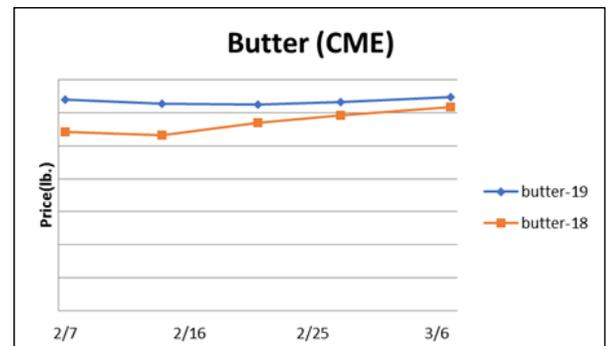

Description	Market Trend	Supplies	Price vs. Last Year
Soybeans, bushel	Increasing	Good	Lower

Rice, Long Grain, lb	Increasing	Good	Lower

Dairy

The cheese markets have remained relatively steady over the last week but are up roughly 10% this year. According to the USDA, U.S. cheese output during December was 1.2% smaller than the prior year but was up 1% from November. Typically, cheese prices can become choppy during March. The butter market has become volatile in recent days but is higher than a week ago. Domestic butter output in December was .1% less than 2017 but was 17% better than the prior month. Since 2014, the average move for spot butter prices from late-March through mid-June was up 15.9%.

Description	Market Trend	Supplies	Price vs. Last Year

Class IV Milk (CME)	Increasing	Good	Higher

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

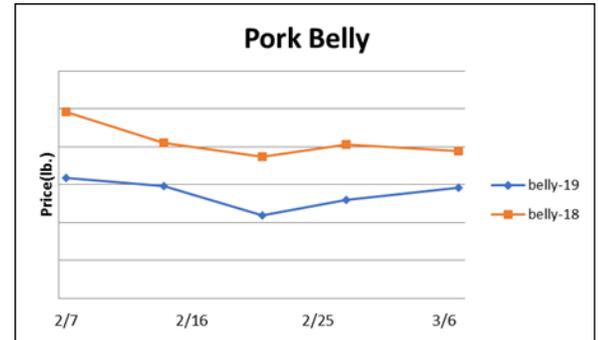

PERFORMANCE
FOODSERVICE

Pork

Amid languishing pork prices, pork production last week was tempered, down 1.6% from the prior week, but still came in 1.4% over last year. After dipping into the low \$.900 price area, pork bellies have been trending choppy to higher and are expected to find further support after a significant export sale was registered in late-February. The USDA pork cutout is likely nearing its seasonal low which would be more in-line with the typical seasonal bottom before rallying higher. Last year the USDA pork cutout rise occurred later than usual.

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

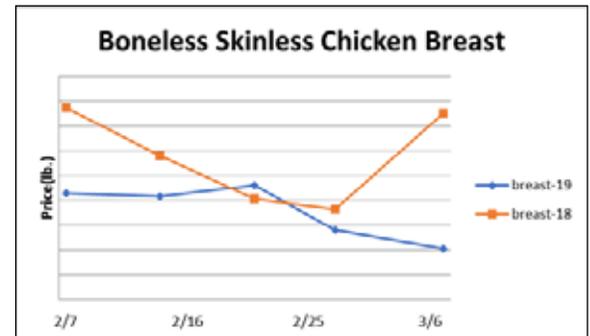

PERFORMANCE
FOODSERVICE

Poultry

For the week ending February 23rd, chicken production was down 1% week-to-week and 1.3% smaller than last year. Despite the declines, the six-week output average remains up modestly (yoy). Chicken wing prices have started to decline due in part to fading interest following aggressive retail deli bone-in wing features occurring in February. Rising production schedules are expected to adequately supply the market into the summer, but chicken prices are not expected to revisit lows noted in 2018. Breast meat price increases have failed to materialize, but risk still remains to the upside heading into early Q2, especially with the tender/breast price spread being relatively wide.

Seafood

The Alaskan Bering Sea snow crab fishing season is nearing its final stages. As of March 5th, 80% of the quota had been landed. The 2018-19 Alaskan Bering Sea snow crab quota is 50% larger than the prior year's historically small number. Yet expectations are for a small 2019 Newfoundland quota which may temper any downside in snow crab prices.

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

PERFORMANCE
FOODSERVICE

Produce

Market Overview

We are still experiencing winter weather-related issues in our growing regions, which has led to quality concerns with many commodities, including iceberg, romaine, and romaine hearts as well as broccoli and cauliflower. We are also seeing shortages in supply. This is an industry-wide issue related to cold weather.

WATCH LIST

- Melons (Honeydew)
- Mushrooms
- Sweet Potatoes and Yams

Apples & Pears

The market is level. Golden Delicious and Granny Smith stocks continue to be depleted faster than other varieties due to strong demand. Expect higher prices for these varieties. Quality is excellent: fruit is crisp and juicy. Sugar levels range from 14 to 18 Brix. Washington Bartlett's are no longer on the market; California stocks will enter the market in June. D'Anjou Pears are readily available, as are Bosc supplies. Sugar levels range from 12 to 14 Brix.

Artichokes

Supply industry-wide is fair. Demand is fair and prices are steady to higher.

Arugula

Supply is light. We are starting to see mildew from rain we received last week.

Asparagus

Prices are slightly higher than last week; although Mexican stocks have increased, demand is strong. Quality is excellent in Mexico: warmer weather is improving flavor and appearance.

Avocados

Markets are steady. Demand is light, but supply isn't too heavy either. Small fruit is very tight, with 60's and 70's being the tightest size. 48s and larger are the sizes to be promoting in the next few weeks. The California crop is delayed and won't get started until the end of March, some growers may start a little earlier, but there has been a lot of rain that usually doesn't happen, in the last month. #2's remain steady and should be consistent going forward.

Bananas

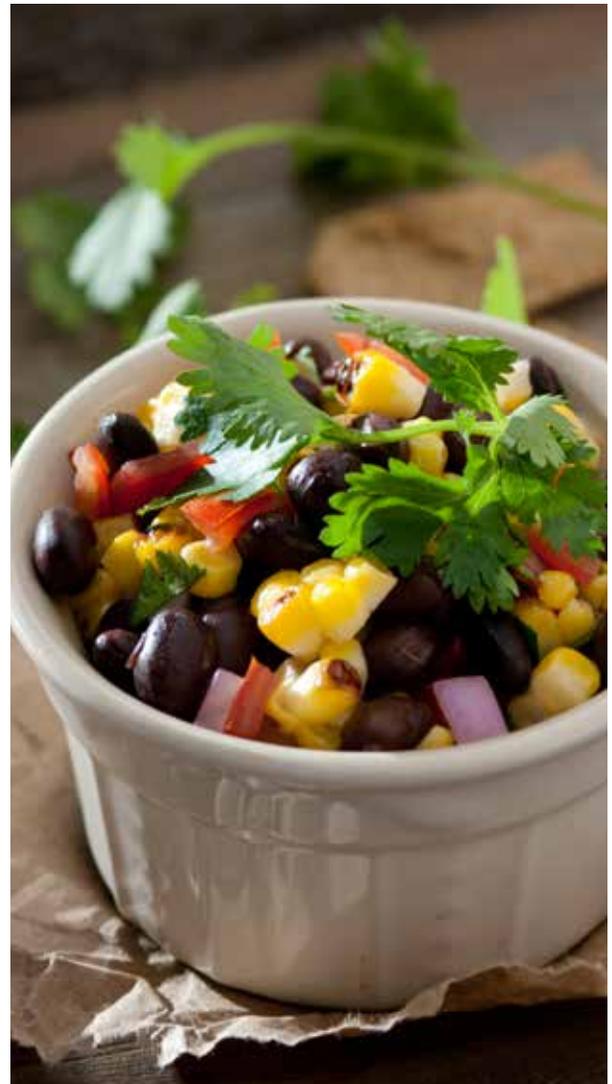

Supplies will be tighter than usual for the next couple of weeks although it looks as if we have made it out of the worst. Difficult growing conditions are affecting the stubbornness of the fruit. Fruit is still taking longer than normal to ripen.

Beans

Round beans are readily obtainable with excellent quality available.

MARKET ALERT

- Broccoli - ESCALATED
- Cabbage (Red/Green) - ESCALATED
- Carrots (Jumbo) - ESCALATED
- Cauliflower - ESCALATED
- Celery - EXTREME
- Green Onions - ESCALATED
- Kale (Green) - ESCALATED
- Lettuce (Iceberg, blends) - ESCALATED
- Limes - ESCALATED
- Mixed Chili Pepper (Jalapeno and Serrano) - ESCALATED

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

PERFORMANCE
FOODSERVICE

Produce *(continued)*

Berries:

Blackberries

Prices are unchanged. The season is past its peak; stocks are starting to diminish. Quality is good: berries are deeply colored, juicy, and sweet. Sugar levels range from 12 to 13 Brix.

Blueberries

The market is low; Mexican and offshore supplies are abundant. California production will start in two weeks. Quality is average: berries are dark blue with a slight blush and sweet, yet tangy flavor.

Raspberries

The market is unchanged; supplies are adequate. Quality is average: warmer weather is forecast later this week, aiding growth and improving flavor. Sugar levels range from 13 to 14 Brix.

Strawberries

Prices remain elevated. Weeks of cold, rainy weather have depleted California volume; expect limited stocks for the next 7 to 10 days. The Mexican season is past peak production, but Florida supplies are ample. Quality is average.

Bok Choy

Supply and quality are good.

Broccoli

Prices remain elevated. Cold weather has slowed growth and lowered volume. Despite inclement weather, Arizona and Mexican quality is very good: discoloration and mildew are issues.

Brussels Sprouts

Cool weather in the desert and Mexico is slowing down production and the market is up. Prices are rising and may continue to rise in the coming weeks.

Cantaloupe

Offshore fruit to the west has increased and we have good supplies, and heavier volumes landing on the east coast. The overall quality has been good with a firm green to straw cast and sugars have been much better on this weeks and last week's arrivals. There are good supplies of 9's, 12's and a few 15's. We expect continued good volumes going forward and quality should hold good as well.

Carrots

ESCALATED, Jumbos are still escalated, but we are seeing improvements.

Cauliflower

High prices persist; cold weather has slowed growth and decreased volume. Quality has fallen: riceyness and uneven texture are issues.

Celery

The market is up; planted acreage is below average this year. Quality is fair: growth cracking is becoming more prevalent, while pith is a minor problem.

Cilantro

Supply is improving but will continue to be light next week. Quality is fair.

Corn

Steady supply and good quality out of Florida and Mexico.

Cucumbers

EAST: Honduras's import numbers are light but steady. FOBs are mostly steady. Growers are trying to get more but with the lackluster demand, firm FOBs aren't holding. Quality is mostly excellent; however, some containers have seen some slight trouble spots.

WEST: Despite cool weather slowing production in some areas, there is still good supply available. FOBs are steady with good to excellent quality available.

English Cucumbers

Supply has firmed up due to the last blast of cold weather to hit central Mexico and very light supply out of the northern greenhouses. Markets should be firm for the next 1 to 2 weeks.

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

PERFORMANCE
FOODSERVICE

Produce (continued)

Eggplant

EAST: Florida's supply is light but steady. FOBs are mostly steady but may start to inch up with the recent cold front. Quality is mostly good; some scarring is evident.
WEST: Good volume and quality is available with FOBs steady.

Fennel

Supply on fennel will be short for the next few weeks due to frost damage and the Yuma season finishing with light supply. We will continue to see a majority of smaller fennel this week - 18s and 24s will remain limited.

Garlic

Supply is firming up and markets are active.

Ginger

Chinese ginger markets are mixed, but quality is good. Also, product is available at higher costs from Brazil, Costa Rica and Honduras and Peru with no major quality issues being reported.

Grapes

The Chilean grape deal is tight but, better volumes on the east than the west we have received 50% less volume than normal to date, as the Chilean Ports were on strike and volumes are down due to some of the early varieties in Chile have been pulled out and new varieties planted but production not at full capacity this year, the Long Beach Pier was also slow playing the unloading process. The Chilean volumes will start to increase next week, prices should start to ease on both coasts. The overall quality has been good to fair, greens are tighter than reds and you will see some minor discoloration in the greens.

Green Cabbage

ESCALATED Due to the cold weather, there will be lighter supply for the next two weeks.

Red Cabbage

ESCALATED Supply remains very short and markets are firming up.

Green Onions

ESCALATED, Due to continued cold temps, the market will remain firm. Current supply is reduced because of cold weather.

Honeydew

Starting to see better supply we are going out of Mexico with very light volumes and fruit is extremely tight and limited there are some 8's available and hoping to see more crossing from Mexico next week. The Offshore Honeydew are also suffering from a white fly problem and volumes are lighter than normal and also the fruit quality has been rough with spotting and also weaker fruit due to the white fly problem.

Jicama

Markets remain firm due to ongoing short supply and will continue to see some quality and shelf life issues.

Kale (green)

ESCALATED, Supply is improving.

Lemons

We have finished our Dist. 3 (Desert) crop and going with heaviest volume here out of Dist. 1 (Central Valley) and will start to pick some Dist. 2 (Coastal Regions) fruit in the coming weeks and just primarily size picking to relieve the trees of some stress. We will also have disruptions on harvesting in Dist. 1 and 2 as the rains are going to blanket the state, through Monday of next week. We will also keep you posted on when we will be getting back in to pick next week. The moisture has also been creating spores in the fields as well and we will hope that it is not too extensive on the clear rot. Again, we are blessed to have the moisture, we will get through it one way or another.

Lettuce:

Butter

Supply is fair. Quality is poor due to weather-related issues.

Green Leaf

Supply and quality are fair to poor. The cold weather this weekend will continue to impact quality. We are having issues with slight yellowing and lighter weights. Yields continue to take a hit, which will create lighter supply this week.

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

PERFORMANCE
FOODSERVICE

Produce *(continued)*

Red Leaf

Supply, demand, and quality is fair.

Iceberg Lettuce

ESCALATED Supply this week will be lower than anticipated as a result of Yuma being pushed back one week due to cold weather. There will continue to be freeze damage after three days of ice last week. On top of the freeze damage, there are occasional mildew stains and light weights. The market is very active and anticipate it to continue that way because of low yields and light weights industry-wide.

Romaine

Supply is below normal. Romaine yields have improved somewhat, but epidermal peel and blister are still present.

Romaine Hearts

Romaine hearts may have occasional blister and peel. Supply and quality are fair to poor due to weather-related issues.

Limes

The market leveled off because shipments from Mexico were up, but crossings are forecast to dip again this week; expect higher prices.

Napa

Supply and quality are good. Demand is fair. Sizing is small.

Onions

Weather across the country has caused a lower demand which has now become equal to supply. This has caused the market to stabilize across the board. Size profiles remain heavy to Jumbos and Colossals, with Medium onions remaining on the tighter side. White onions have become extreme in price, with very little supply available and this will likely continue through the remainder of storage season as the Northwest has a short supply. Reds remain more plentiful than other colors, and straight load deals exist out of both Idaho/Oregon and Washington. Typically, during this time, we begin to see Mexican product crossing, which usually creates downward pressure on pricing. However, because Mexico is keeping their supply for their local market, we are not seeing any increase in supply. We will likely not see Mexican onions cross through South Texas until the second week of February. Until this occurs, we will likely see incremental increases in price on all colors and sizes.

Oranges

We have rain starting today and forecasted through Monday on and off, we were able to get some fruit picked the last few days as we had to wait for fields to dry enough to get in after our rains. We should be able to make it through with supplies just depends on how much rain we get as the forecast is all over the board anywhere from .50-1" depending on who you listen to. We are experiencing some clear rot and also puff and crease in most blocks showing up and will continue to get worse once our weather warms up, just lots of moisture in the ground. The overall color is full, and the fruit is eating good, and will only get better once the sun comes out as the water does leach out some of the sugar.

Parsley(Curly, Italian)

Supply and quality are good.

Green Bell Pepper

EAST: There is still a decent supply in the FL market, but things are starting to dry up quickly. By no means does this indicate an upcoming shortage, however, look for FOBs to start making their way upward next week. Quality is fair to good with scarring and bruising being the most evident. WEST: The recent cold fronts have slowed production enough to start moving FOBs upward. Spring crops are slightly behind schedule as well due to the cold weather. With warmer temps on the horizon, look for the spring crop to come on board in the next 10-14 days and FOBs to push back downward. Quality has recently been good to excellent.

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

PERFORMANCE
FOODSERVICE

Produce *(continued)*

Jalapeños (Chiles)

EAST: Light production in FL is typical of this time of year. Spring crops will bring more volume in the upcoming weeks. FOBs are down with good quality available.
WEST: MX is still in the rebound stage from bad weather months ago. While they haven't made a full recovery yet, things are looking better. FOBs are steady to down slightly with excellent quality available.

Red & Yellow Bell Pepper

The market is escalating. Low temperatures have decreased yields; it is taking longer for green peppers to turn red/yellow. There is a wide range of quality on the market: bruising, decay, and premature breakdown are industry-wide issues.

Pineapple

Low prices persist. Supplies are plentiful; 7- and 8-count sizes dominate the crop. Sugar levels range from 13 to 16 Brix.

Idaho Potatoes

The market has strengthened in Idaho on both Norkotah and Burbank varieties. Due to cold temperatures in Idaho, growers have had a difficult time hauling this week. This has severely decreased overall supply. Additionally, Norkotah supplies are dwindling, and more growers are getting into their Burbanks supply. The Burbanks are heavy to small sizes with very few 40ct-70ct available. This is causing an increase in price throughout the state on all large size counts. We expect we will continue to see product remain tight in Idaho until we get through the Summer and into new crop in the Fall

Radishes

Markets are firming up due to heavy precipitation and wind damage to fields. We see FOB pricing ticking up this week.

Salad Blends

The market is up. Iceberg and romaine supplies are tight but should increase with warmer weather this week. Inspectors are closely monitoring finished cartons to achieve the best quality packs.

Snow and Sugar Snap Peas

Quality is good, and supply is increasing.

Spinach (Bunched)

We are seeing some mechanical damage; however, quality is fair.

Spinach (Baby)

Supply is good. There could be some quality issues, due to cold weather.

Spring Mix

Prices remain high but may ease later this week when warmer weather aids growth and increases volume. Quality is fair: mildew and discoloration are occasional problems near the end of shelf-life.

Yellow Squash/Zucchini

EAST: There is still a good amount of volume from FL, however, quality is back to being poor. With MX supply a little light and decent quality scarce, FOBs are moving upward.
WEST: Cooler temps slowed production, leaving some light supplies in the region. FOBs are up and quality is poor to fair. Look for things to rebound in about 10-14 days with warmer temps on the horizon.

MARKET TRENDS

WEEK ENDING MARCH 15, 2019

PERFORMANCE
FOODSERVICE

Produce (continued)

TOMATOES – EAST

Rounds

Florida's round production is on the downhill slide of the winter crop and will see light supplies for the next few weeks as we wait for spring crops to begin. There is not a flush of fruit in the forecast. Sizing is starting to tighten up, with extra-large being a little less available, large is somewhat available and mediums are readily available. FOBs are up moving into next week as the supply trickles downward. Quality is still sporadic due to the awkward weather patterns the area has seen. Things have been cold, hot, & rainy the last few weeks which is taking its toll on quality.

Romas

Florida's light production continues to truck along steadily. FOBs are somewhat steady, with some slight movement and MX's production is lightening up for the next few weeks. Similar to rounds, quality varies by grower with most fruit good to excellent.

Grapes

Yields are a little light but there is still enough to meet demand. FOBs are mostly steady, and quality is overall good.

Cherries

Yields are a little light but there is still enough to meet demand. FOBs are trending slightly upward due to lighter supplies. Quality is good.

TOMATOES – WEST/MEXICO

Rounds

March is a typical transition time from winter to spring crops. While there is still ample supply to meet market demand, we are starting to see things lighten up just ever so slightly. Coupled with some cold fronts that have passed through and Florida's light production, it is likely we will see a lift in FOBs moving into March. FOBs for next week are steady to pushing upward just slightly. Quality is good to excellent. Please note that "softer" to the touch feeling fruit is typical of MX Vine Ripes.

Romas

March is a typical transition time from winter to spring crops. While there is still ample supply to meet market demand, we are starting to see things lighten up just ever so slightly. Coupled with some cold fronts that have passed through and Florida's light production, it is likely we will see a continuous lift in FOBs moving into March. FOBs for next week are beginning to push upward just slightly. Quality is good to excellent.

Grapes

Promotional volume is crossing regularly from MX. FOBs are steady week over week with excellent quality available.

Cherries

Good volume continues to cross daily. FOBs are steady; however, quality has dipped with only fair quality at best available. We recommend keeping your inventory snug until quality improves. Shelf life is heavily affected.

Watermelons

The market is slightly lower than last week. Stocks are shipping from Southern Mexico and Central America at this time. Availability is increasing. Quality is good: sugar levels are average for this time of year.
